**UNCHARTED 3**  
DRAKE'S DECEPTION

Yemen Chase

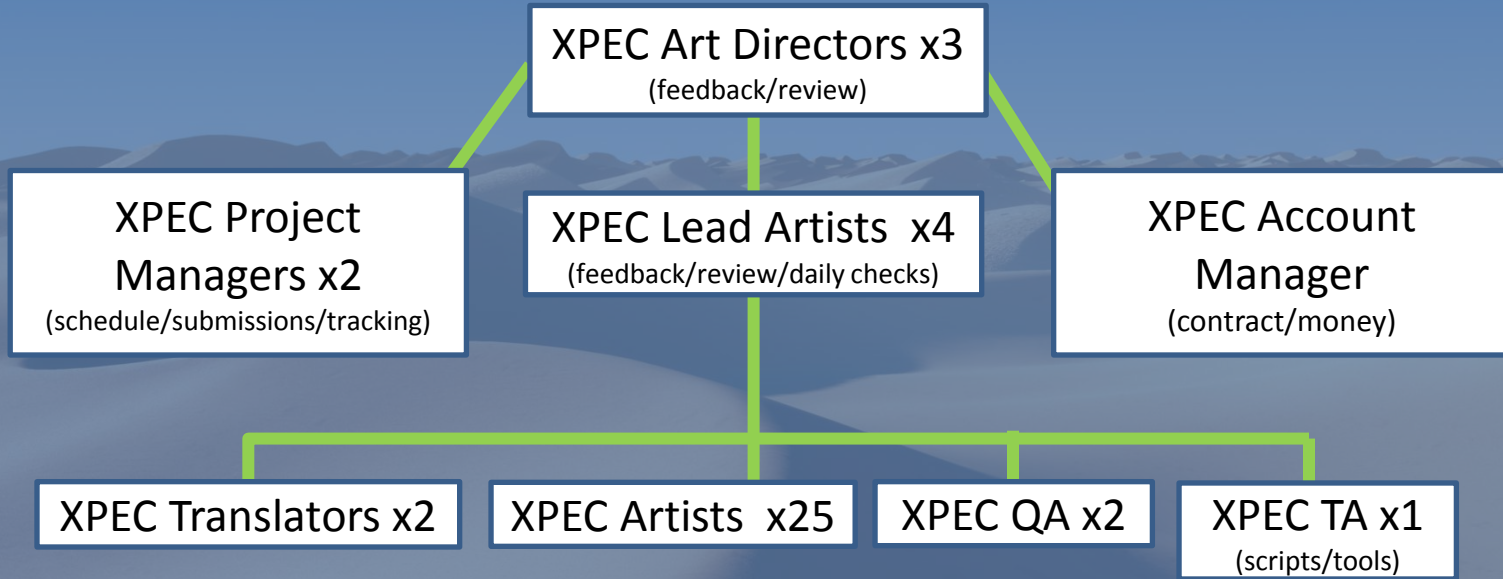

- Share more about the process of working with outsource
- How we resolved lack of perfect "art package"
- Environment not finished and subject to change

Peak UC3 arrangement

Concept and key art was few; only 2 provided

Robh

Block mesh and briefing notes

# UNCHARTED 3

DRAKE'S DECEPTION

## XPEC Concept Art

- I Cylindrical Pile
- II beams pile
- III plank pile

Make 3 variants;  
1 wood plank pile.  
1 Metal beams pile  
1 Metal Cylindrical Pile

- Normally we would do supplementary concept
- Keep to 2 days maximum for concept arts

# UNCHARTED 3

DRAKE'S DECEPTION

XPEC Concept Art

- Was useful experience for us

# UNCHARTED 3

DRAKE'S DECEPTION

XPEC Concept Art

# UNCHARTED 3

DRAKE'S DECEPTION

XPEC Concept Art

- Designer block mesh
- Doesn't follow Art technical specification
- Block mesh is used for Team Kick off
- Level design not final, subject to change

- **Video Feedback extremely useful**
- **Outsource team does not have access to the game**
- **In general communication between studios was very good**

**Feedback and communication**

**90% Feedback is  
Image file**

**Other 10% is pure text**

**½ Day to translate  
during project peak**

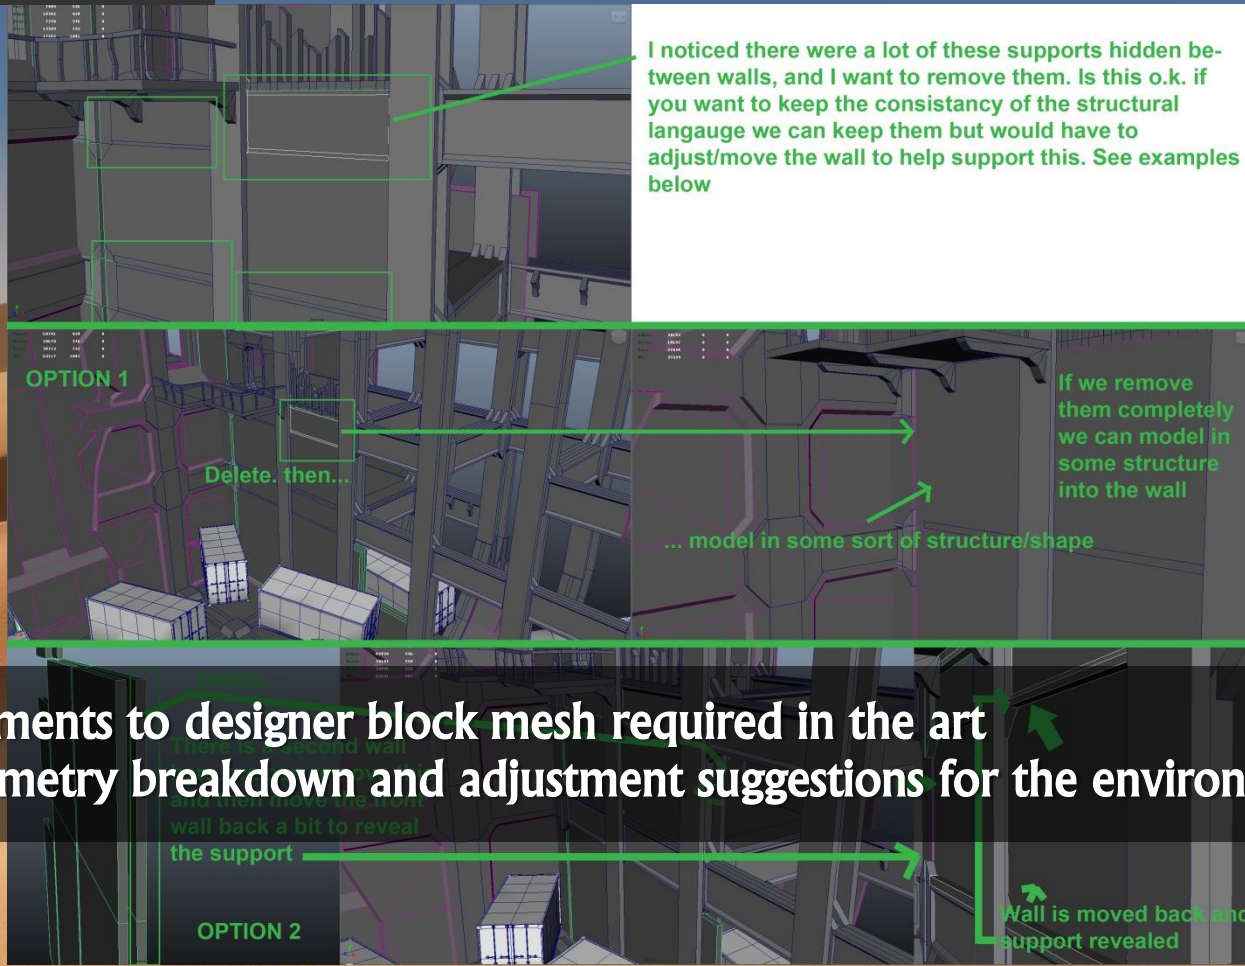

**Pictures paint a thousand words  
in many different languages**

- Front load surprises and technical issues
- Looks like block mesh but a lot of behind the scenes work
- Clean up and familiarization
- Ensure it follows Art technical specification

- Heavy adjustments to designer block mesh required in the art
- Provided geometry breakdown and adjustment suggestions for the environment

# UNCHARTED 3

DRAKE'S DECEPTION

## Additional Reference

- Found additional photo reference
- Short on time so kept things simple and clear

add railing, doors, stairs, ladders and so on  
添加栏杆, 门, 楼梯, 梯子和窗

## First pass shape definition

This area is a NO GAMEPLAY AREA...so you can change anything here just make it cheap.  
这个区域不是gameplay区域, 所以团队可以随意改变这里所有东西, 让它尽可能的便宜。

Defined a first pass shape definition submission that would be acceptable for the first pass block in and shape call out. The environment was still subject to change, too much detail at this early stage would be waste

## Ericks Callouts...

i-beams...you will probably need only 4-6 pieces...like this...  
grave-i-beam-horiz-01.ma  
grave-i-beam-horiz-02.ma  
grave-i-beam-horiz-end-01.ma  
grave-i-beam-horiz-end-02.ma

Create a floor panel prototype....you will probalby need about 5 kinds...  
grave-floor-2section-01.ma  
grave-floor-1section-01.ma  
grave-floor-edge-01.ma  
grave-floor-edge-02.ma  
grave-floor-port-hole-01.ma

anything else...make it tfrag.

- Example of simple prototype call outs
- Team was given a crash course

ie tfrag...

grave-i-beam-wall-brace-01.ma  
grave-i-beam-wall-brace-connector-01.ma

grave-i-beam-stub-broken-01.ma  
grave-i-beam-stub-broken-02.ma  
grave-vent-ledge-01.ma

These i-beams and repeatable structures  
can be prototypes.

grave-i-beam-small-broken-01.ma  
grave-i-beam-small-broken-02.ma  
grave-i-beam-small-broken-03.ma  
grave-i-beam-curved-bottom-01.ma

- Example of simple prototype call outs
- Team was given a crash course

Unique structures will be tfrag, or NON-repeatable...but you should GROUP them as a gameplay SET like these...so, it is easier to understand it in context to the gameplay.

this should be a  
prototype...you can eliminate  
the bend to make it the same.

- Example of simple prototype call outs
- Team was given a crash course

these 4 beams should be a prototype set....

- Example of simple prototype call outs
- Also example of change requests

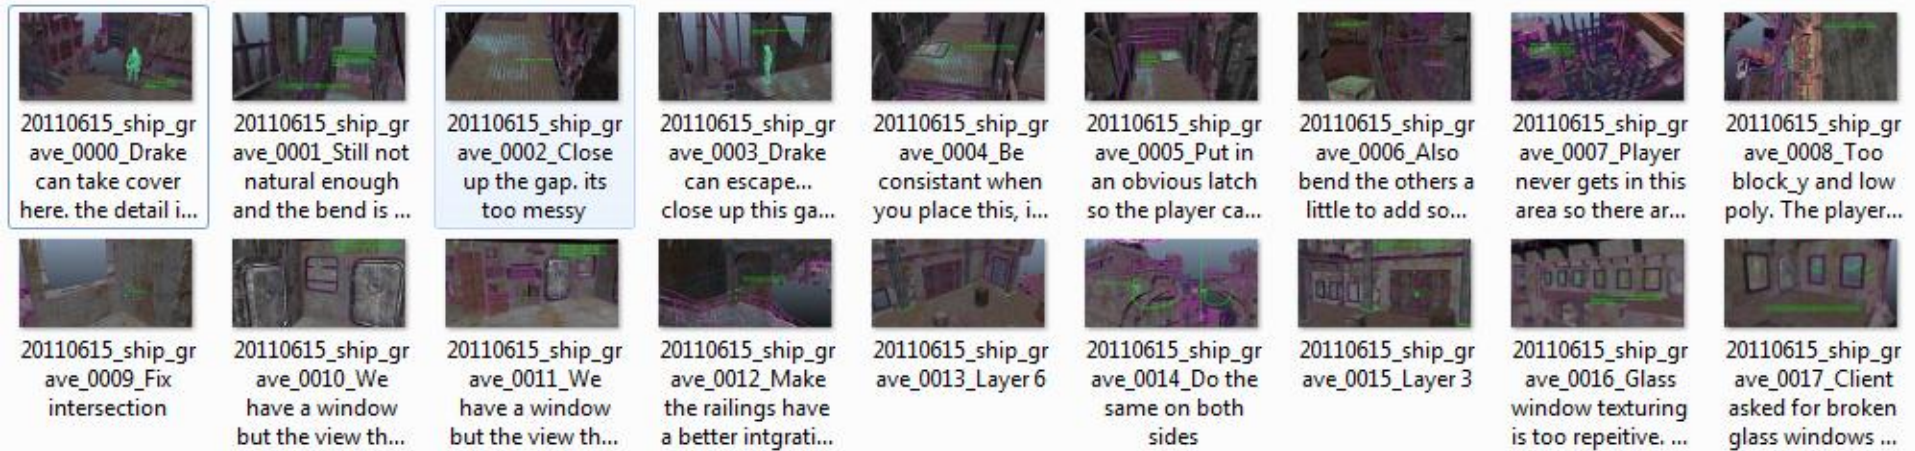

- Team also created/suggested suitable prototypes based on the crash course
- This happens in tandem with the first pass model submission
- Still don't go into too much model detail
- Worked in a way that allowed naughty dog to make as much changes as they wanted

- Final shape comes about from iterative work on the prototypes
- First major Milestone
- Danger of being cut

**Regular internal reviews**

**Daily checks**

**Prioritize feedback and assign ownerships**

**Communicate what can not be fixed on time but offer a new date for when Missed feedback can be address**

- Has to be done in time for Naughty Dog internal lighting schedule
- At this stage geometry and UV's are about 80% final
- Base color only required

- Final major milestone
- If we don't cut it level gets cut
- At this point 2 sections of the level and a elaborate set piece are cut

Before

4 Shaders

After

3 Shaders

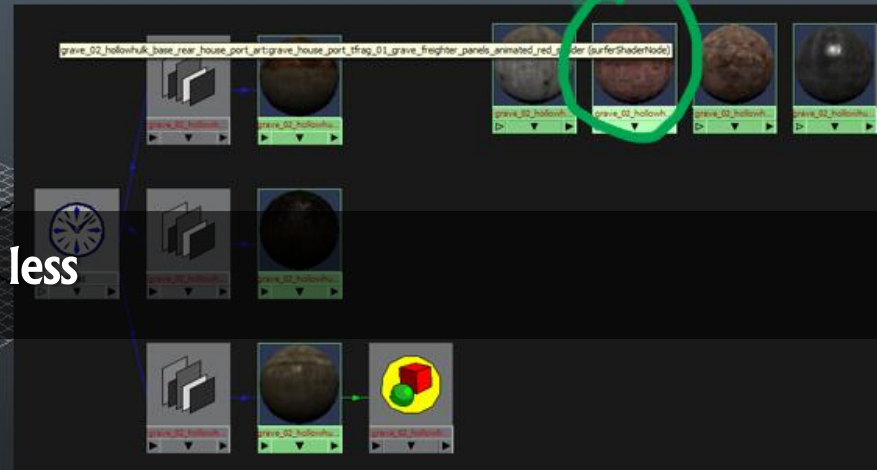

- Final 10%
- Manually checking every area of the environment
- Trying to optimize as much as possible

Not only can we optimise the shader we can do a better UV lay out and painting of all the stairs landing. Texture them and UV them similar to this. I checked in the example but you will still need to clean up the UV's and the mesh as it was an inefficient file to begin with.

Optimise this shader.  
Player never goes here  
and we only assign  
the shader in such a  
small area.

- Trying to keep the same approved look with less

# UNCHARTED 3

DRAKE'S DECEPTION

- Allow you to make more content if your title is heavily dependent on variety
- Offload minor or repetitive tasks /assets like LOD, Minor props, B/G buildings, low supportive characters
- Compliment the internal core team and make more rich content e.g. high end characters, assets for cut scenes, environments
- Test new pipelines, tools, technology
- For some developers its to cut costs
- For other developers its to get more done in a short amount of time

- 
- Very specific to Naughty Dog and UC series
  - Flat hierarchy and willingness for direct communication with key members
  - Minimal layers
  - Not the best way or only way
  - Plenty of room for improvement e.g. upgrade MS Project
  - Goal to begin a shared library of contextual outsourcing circumstances

# What made it worked.....

- Keeping the Artist directly involved in the Outsourcing process
- No delays in feedback and making it part of their work pipeline.
- Constant communication and availability for the vendors
- Understanding the capabilities of the vendor's team.

# UNCHARTED 3

DRAKE'S DECEPTION

Moving forward...

Thank You!
